U.S. FOREIGN INTELLIGENCE SURVEILLANCE COURT

2020 MAY 29 PM 4:12

Washington, D.C. 20530

LEEANN FLYNN HALL
CLERK OF COURT

May 29, 2020

The Honorable James E. Boasberg
United States Foreign Intelligence Surveillance Court
333 Constitution Avenue, N.W.
Washington, D.C. 20001

Re: *In Re Accuracy Concerns Regarding FBI Matters Submitted to the FISC*,
Docket No. Misc. 19-02

Dear Judge Boasberg:

The Government respectfully submits this update as required by the Corrected Opinion and Order of the Foreign Intelligence Surveillance Court (FISC or the Court) entered on March 5, 2020 (hereinafter March 5, 2020 Order). Specifically, the Government herein provides the Court with updates regarding technological improvements being undertaken by the Federal Bureau of Investigation (FBI) to aid in consistency and accountability within the FISA application process.

By way of background, the March 5, 2020 Order directed the Government to provide by March 27, 2020, "a description of any planned or implemented technological improvements to the process of preparing FISA applications or verifying the information contained in FISA applications and updates every thirty days thereafter until they have been fully implemented." March 5 Order at 17. Following the Court's grant of a one-week extension, the Government filed a response to the March 5, 2020 Order on April 3, 2020 (the April 3, 2020 Response) and provided the Court with an update regarding technological improvements to the process of preparing, or verifying the information contained in, FISA applications. Response to the Court's Corrected Opinion and Order Dated March 5, 2020 and Update to the Government's January 10, 2020 Response, at 19-20. In further response to the March 5, 2020 Order, the FBI filed a declaration on April 30, 2020 (the April 30, 2020 Response) that provided an additional update describing the Government's planned or implemented technological improvements related to the FISA process. Supplemental Response to the Court's Order Dated December 17, 2019; the Court's Scheduling Order Dated January 17, 2020; and the Court's Corrected Opinion and Order Dated March 5, 2020, Attachment A at 10-12.

The Government hereby provides an additional update regarding these technological improvements. As explained in the April 3, 2020 Response, the FBI currently manages its FISA-related workflow processes in a platform called the FISA Management System (FISAMS). However, because FISAMS is outmoded and past its anticipated lifecycle, the FBI is transitioning to a system colloquially known as "the Bridge." Also as described in the April 3, 2020 Response, the Bridge is designed to increase collaboration within FBI, as well as between

FBI and OI, though it is not expected to replace FISAMS until at least the end of the fourth quarter of fiscal year 2021.

The FBI's efforts to develop and implement the Bridge are ongoing. As explained in the April 30, 2020 Response, one feature being incorporated into the Bridge is the ability for the system to connect with the FBI's case management system, known as Sentinel. Since the last report, the Bridge team has received authorization from the Sentinel team to build and integrate technical interfaces with Sentinel, which will allow for the exchange and validation of data between the two systems. This will afford Bridge users the ability to ensure a high level of data integrity, by automatically cross-referencing data input in the Bridge with existing case data in Sentinel. The interface between the Bridge and Sentinel also will provide users the ability to serialize to Sentinel documents created in, or required for, the Bridge, including documents necessary for the creation of an accuracy subfile. During the most recent reporting period, the Bridge team also deployed an automated testing suite that will enable automatic and continuous testing of the Bridge application's user interface. Automated testing enables the Bridge team to conduct testing at a greater frequency and in a more repeatable way, thereby allowing the team to discover and address technical bugs, or changes in requirements, more efficiently and effectively.

This letter constitutes the Government's second thirty-day update in the above-captioned docket regarding planned or implemented technological improvements. The FBI has reviewed this response and confirmed its accuracy.

By separate motion, and for the reasons set forth therein, the Government will seek leave to modify the reporting period established by the March 5, 2020 Order in order to provide the Court with updates on an interval that more closely corresponds to the FBI's development teams' review and implementation of operational requirements. Pending the Court's consideration of that motion, however, the Government will continue to provide updates on a thirty-day interval as required by the March 5, 2020 Order.

Respectfully submitted,

Kevin O'Connor
Chief, Oversight Section
Office of Intelligence,
National Security Division
U.S. Department of Justice
